

Cubebot Small Colours

Colourful 2.5" folding cube robot puzzles.

Robot toys are usually made of plastic and require batteries. Not this one! Inspired by Japanese Shinto Kumi-ki puzzles, the Cubebot is a non-traditional take on the toy robot. Cubebots's powerful hardwood frame can hold dozens poses, and his elastic-band muscles and durable wood limbs make him impervious to breakage. When it's time for him to rest, he folds into a perfect cube. An enduring classic that will withstand generations of play.
